

QuickSheet: SSR Frabbusware Administration

Welcome to SSR Frabbusware! This QuickSheet will help you get started.

Default Permissions

When Frabbusware is first enabled, certain permissions are set by default.

For the standard roles in SSR MumbleWare:

Table 1: User Permissions for Standard Roles

	Access Frabbusware	Use Analysis Tools	Edit Personal Dashboards	Edit Company Dashboards
Standard	Yes	Yes	Yes	No
Analysis	Yes	Yes	Yes	No
Report Only	Yes	Yes	Yes	No
Administrative	Yes	Yes	Yes	Yes
Frab-busware Only	Yes	Yes	Yes	No

Access Frabbusware

Permission to access the Frab-busware tab, view perspectives, drill down on dials, and so on. View only.

Use Analysis Tools

Permission to use the analysis tools in the Frabbusware tab.

Edit Personal Dashboards

Permission to create and edit components for personal use and share with other users.

Edit Company Dashboards

Permission to assign access permissions to plans and/or users, create and edit company components and starter components, and publish perspectives to users.

For custom roles:

- Any role that contains Report Access will have Access Frab-busware, Create Personal Dashboards, and Use Analysis Tools.
- Any role that contains Admin Dashboards will have Create Dashboards.

Dashboards and Frabbusware

Although the original Dashboards tab and the new Frabbusware tab can coexist, you may want to hide the Dashboards tab to keep things simple. To disable it, do this:

1. Go to Admin > General Setup.
2. Under Dashboards Tab, near the bottom of the page, uncheck the Enable Dashboards box.
3. Click Save.

Creating Components

For information on creating components like dials and dashboards to share with or publish to your company's users, please see the [Frabbusware User Guide](#).

Unpublishing the Starter Components

Once your company has been using Frabbusware for a while, you may wish to unpublish the Starter Components to help people keep their components menus uncluttered. To do this:

1. Click the Frabbusware tab to open Frabbusware.
2. Open the Design Screen by clicking the  Options button and selecting **Design Screen**.
3. Click the Perspectives button in the Components menu.
4. Expand the Starter Perspectives folder in the Components Menu.
5. Click the Starter Perspective to load it in the main editing area.
6. Click Publish this component in the Actions menu.
The Publish dialog appears.
7. Double-click one or more usernames or plan names in the Selected list to remove them.
8. To see exactly which users will still have access, check the Show all individuals box.
This will make the dialog view-only. To resume removing names from the list, uncheck the box.
9. To add a name to the Selected list, double-click it in the Available list.

When you are satisfied with the Selected list, click Save. Now you have access to the Starter Components in case you need them in the future, but other users will not see them.
